Top Tips on How to “Winterize Your Car” this Holiday Season

1. Replace Your Wiper Blades: Improve your visibility by investing in winter wiper blades to prevent ice and snow buildups.

2. Test Your Battery: Visit your local mechanic to inspect the battery and terminals. Remember, batteries typically last 4-5 years.

3. Choose Fuel Wisely: Higher quality fuels help with seasonal weather engine starts. And by choosing the correct fuel, you can help prevent vapor lock and cold engine starts. All grades of Amoco Fuels — regular, mid-grade and premium — have been rated #1 in quality for 16 years, according to consumers in an annual nationwide survey

3. Check Your Tires: Move safely on slippery surfaces by checking your tires for proper inflation and treadwear.

4. Pack An Emergency Kit: Always travel with an emergency roadside kit including necessities such as a flashlight, safety triangles, jumper cables, portable air compressor, and a first-aid kit.

5. Change Your Oil: Maintain proper engine performance by changing your oil every 3,000 miles or three months and using light or synthetic oil throughout the winter season.
